

Codio Activity 14.1

Q1:

```
public class Q1{  
    public static void main(String args[]){  
        // Write your code here  
        System.out.println("This is a data engineering course.");  
    }  
}
```

Q2:

```
public class Q1{  
    public static void main(String args[]){  
        // Write your code here  
        int var1a = 15;  
        double var1b = var1a; // Automatic casting: int to double  
        System.out.println(var1a);        // Outputs 15  
        System.out.println(var1b);       // Outputs 15.0  
    }  
}
```

Q3:

```
public class Q3{  
    public static void main(String args[]){  
        // Write your code here  
        String var2a = "000";  
        int var2b = Integer.valueOf(var2a);  
        System.out.println(var2a);        // Outputs 000  
        System.out.println(var2b);    // Outputs 0  
    }  
}
```

Q4:

```
public class Q4{  
    public static void main(String args[]){  
        // Write your code here  
        String[] animals = {"cat", "dog", "fish", "rabbit"};  
        for(int i = 0; i < animals.length; i++) {  
            System.out.println("Animal #" + i + " is a " + animals[i]);  
        }  
    }  
}
```

Q5:

```
import java.util.Scanner;

public class Test{

    public static void main(String args[]){

        Scanner input = new Scanner(System.in);

        if(input.hasNextInt()) {

            int num = input.nextInt();

            //Edit this line of code to multiply the integer by 4

            System.out.println(num*4);

        }

        // Edit this line of code to return the error message

        else { System.out.println("Please enter an integer"); }

    }

}
```
